Panelists:

- Douglas H. Carsten, Partner, *Foley & Lardner*
- Nathan A. Beaver, Partner, *Foley & Lardner*
- Dr. Sami Guzder, Chief Scientific Officer, *Avesthagen Limited*
- Jeffrey W. Winkelman, Ph.D., Vice President Oncology Programs, *BioSante Pharmaceuticals*

New Biosimilar Legislation

- Official title: “Biologics Price Competition & Innovation Act of 2009”
- The Act amended the Public Health Service Act (PHSA) to create a new pathway for the approval of biological products biosimilar to an approved reference product or biosimilar and interchangeable with an approved product.

Background

- Two main pathways for seeking drug approval from the FDA

©2010 Foley & Lardner LLP

10/09/10

Definitions

- A “biosimilar” product is:
 - (1) highly similar to the reference product notwithstanding minor differences in clinically inactive components; and
 - (2) no clinically meaningful differences in terms of safety, purity and potency.
- An “interchangeable” biosimilar is a biological product that “may be substituted for the reference product without the intervention of the health care provider who prescribed the reference product.”
 - Need to show that for a biological product that is administered more than once the risk of safety or diminished efficacy of switching between the reference product and interchangeable is not greater than using reference product without switch.

©2010 Foley & Lardner LLP

10/09/10

Effective Date

- Effective date is March 23, 2010 with full retroactivity
- Applies to already approved biologics
- Applies to biologics now under review

Scope of Biologics Covered

- Anything for which a BLA is filed
 - “Biologics licensing application” (“**BLA**”) is required for most complex biotech products:
 - “a virus, therapeutic serum, toxin, antitoxin, blood, or blood component or derivative, allergenic product, or analogous product . . . applicable to the prevention, treatment, or cure of a disease or condition of human beings.” PHSA § 351(i)
 - New legislation amends this definition to include “protein (except any chemically synthesized polypeptide)”

Basic Requirements for US Biosimilar Application

- (1) Analytical showing product is “highly similar” to a reference despite “differences in clinically inactive components”;
- (2) Animal studies (including the assessment of toxicity);
- (3) Clinical study(ies) sufficient to demonstrate “safety, purity and potency in 1 or more appropriate conditions for use” that parallel an approved use of the reference product;

*note: FDA may determine that any of 1-3 is not required in a given case

©2010 Foley & Lardner LLP

10/09/10

Basic Requirements For US Biosimilar Application

- (4) Requires same mechanism of action as reference product (if known) for approved indication
- (5) Label for biosimilar must match approved indication of reference product
- (6) Route of administration, dosage form, and strength must match reference product
- (7) Must be approved manufacturing facility (safety, purity and potency)

©2010 Foley & Lardner LLP

10/09/10

Standard for Approval of Biosimilar

- The FDA will approve the biosimilar application if:
 - (1) it is found to be “biosimilar”; and
 - (2) it can be expected to produce the “same clinical result as the reference product in any given patient”

Standard for Approval of Interchangeable Biosimilar

- The FDA will label a biosimilar as “interchangeable” if:
 - (1) it is found to be “biosimilar” and
 - (2) expected to produce the “same clinical result as the reference product in any given patient”
 - (3) for a biological product that is administered more than once the risk of safety or diminished efficacy of switching between the reference product and interchangeable is not greater than using reference product without switch.

Data Exclusivity For Reference Product

- 12 years of market exclusivity for innovators, i.e., no biosimilar will be approved before expiration of 12 year period
- Runs from date of first approval for reference product
- First 4 years of data exclusivity from approval date, i.e., no biosimilar application will be accepted by FDA during that period

6-Month Pediatric Exclusivity Possible

- Innovators may obtain an additional 6 month pediatric exclusivity based on similar provisions for small molecule drugs
- The 6 months is added to the 4 year filing period (no biosimilar application may be filed before 4 years and 6 months) and to the 12 year data exclusivity period (no biosimilar application may be approved before 12 years and 6 months)

Strategic Consideration

- 12 year exclusivity does not apply to
 - (i) subsequent app filed by same sponsor for (a) change resulting in new indication, route of administration, dosing schedule, dosage form, delivery system, delivery device or strength, or (b) structural modification that does not change safety, purity or potency.
- Therefore, need a structural modification that changes “safety, purity or potency” but not yet clear what FDA thinks is such a change

10/09/10

NDA vs. BLA: Market Exclusivities

- NDA Market Exclusivities
 - NCE 5 year exclusivity for New Chemical Entity
 - 3 year Waxman-Hatch Exclusivity
 - Pediatric Exclusivity
 - 7 year Orphan Drug Designation and Exclusivity
- BLA Market Exclusivity
 - 12 year exclusivity for innovator
 - 6 month Pediatric Exclusivity
 - 7 year Orphan Drug Designation and Exclusivity

©2010 Foley & Lardner LLP

10/09/10

Exclusivity For 1st Approved Interchangeable Biosimilar

1st “interchangeable” biosimilar eligible for additional exclusivity:

THE EARLIER OF:

- (1) One year exclusivity from first marketing date of first approved interchangeable biosimilar;
- (2) 18 months after final court decision or dismissal of action against applicant of the first approved interchangeable biosimilar;
- (3) 42 months after approval of first interchangeable biosimilar if litigation is still pending; or
- (4) 18 months after approval of first interchangeable biosimilar if no litigation is filed

Strategic Consideration

- Innovator should consider keeping aspects of the manufacturing process a trade secret, thereby making it more difficult for the biosimilar applicant to replicate a product such that it could be deemed "interchangeable"

Mechanism For Filing Suit Against Biosimilar Applicant

- 20 days after FDA accepted biosimilar application, biosimilar applicant must provide BLA holder (1) copy of biosimilar application and (2) information describing manufacturing process for biosimilar.
- Therefore, BLA holder is given access to any confidential information of biosimilar applicant needed in its discretion to assess whether a claim of patent infringement may be made

©2010 Foley & Lardner LLP

10/09/10

Mechanism For Filing Suit Against Biosimilar Applicant (*con't*)

- Confidential info may ONLY be used for evaluating claim of infringement
- Access to: one or more outside counsel designated by BLA holder and one in house counsel (not involved in prosecution of relevant or related patents), and owner of patent exclusively licensed if retained right to enforce patent or participate in litigation.

©2010 Foley & Lardner LLP

10/09/10

Mechanism For Filing Suit Against Biosimilar Applicant (*con't*)

- 60 days after receiving copy of biosimilar application, BLA holder must send (1) a list of patents that may be infringed (“BLA list”) and (2) indication of any of those patents in list (1) that are available for licensing

Mechanism For Filing Suit Against Biosimilar Applicant (*con't*)

- Within 60 days after receiving BLA list, biosimilar applicant must respond and identify any patents in BLA list it believes may be infringed and for each one state why it is invalid/unenforceable/not infringed, or state that it will not begin marketing until expiration date
- Biosimilar applicant must also respond to BLA holder’s offer to license patent
- Biosimilar applicant may also within this timeframe provide BLA holder with list that biosimilar applicant believes could be subject to infringement claim (“biosimilar list”)

Mechanism For Filing Suit Against Biosimilar Applicant (*con't*)

- Third 60 day period is for BLA holder to provide response to non-infringement/invalidity arguments from biosimilar applicant
- Thereafter, both parties engage in “good faith negotiations” to resolve disputes about which patents apply. No guidance in legislation re when negotiations to begin but presumably quickly
- When agreement is reached as to which patents apply, innovator has 30 days to file suit

©2010 Foley & Lardner LLP

10/09/09

Mechanism For Filing Suit Against Biosimilar Applicant (*con't*)

- If no agreement between parties within 15 days of starting negotiations, biosimilar applicant must notify BLA holder of the number of patents that it believes should be subject for an action for patent infringement and it will provide in a second list (“2nd biosimilar list”)
- Within 5 days of notice, parties exchange list of patents each believes to be subject of infringement suit. Number of patents in 2nd BLA list cannot exceed number of patents in 2nd biosimilar list, but if 2nd biosimilar list does not list any patents, 2nd BLA list can list one patent.

©2010 Foley & Lardner LLP

10/09/09

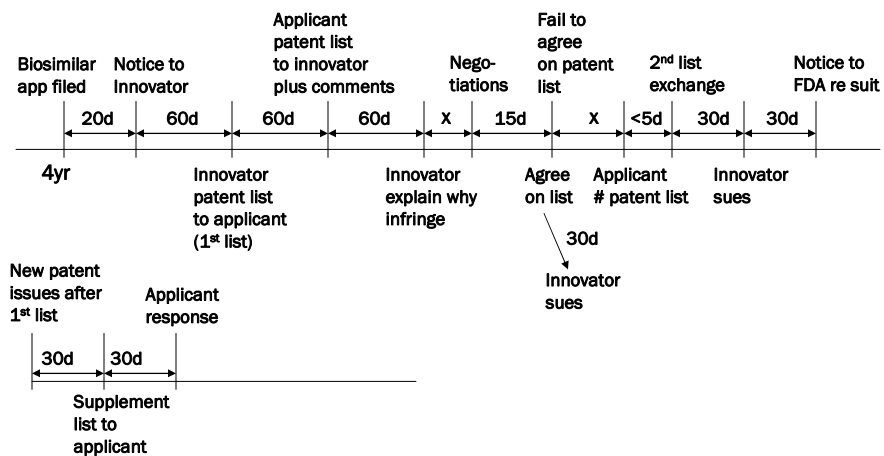

Mechanism For Filing Suit Against Biosimilar Applicant (*con't*)

- BLA holder shall sue biosimilar applicant on each patent in second lists within 30 days of exchanging second lists
- Biosimilar applicant provides notice to FDA within 30 days after complaint served, which will be published in the Federal Register
- For new patents issued after initial list of patents is sent to biosimilar applicant, BLA holder must provide supplemental notice within 30 days. Legislation is not clear whether the other steps provided above are also followed with the newly issued patents.

©2010 Foley & Lardner LLP

10/09/03

Timeline for Filing Suit Against Biosimilar Applicant

©2010 Foley & Lardner LLP

10/09/03

Strategic Consideration

- Due to short time periods for providing patent lists to biosimilar applicant, diligence should be performed early :
 - Creating and maintaining lists of all patents owned and licensed, and products to which they relate is essential.
 - Assess relative strength of applicable patents so that litigation strategy is developed before biosimilar applicant files for approval

Preliminary Injunction

- Biosimilar applicant to provide notice to BLA holder 180 days before market entry
- Following 180 day notice, BLA holder may seek a preliminary injunction preventing manufacture or sale until a court decides patent validity, enforcement and infringement of the patents in the first BLA list or biosimilar list that are not subject to litigation based on the above process.

Preliminary Injunction (*con't*)

- For example:

Innovator List No. 1	Biosimilar List No. 1	Innovator List No. 2	Biosimilar List No. 2	Patent Infringement Action	PI
A	E	A	E	A	C
B	F	B	F	B	
C				E F	

©2010 Foley & Lardner LLP

10/09/10

Strategic Consideration

- BLA holder cannot seek a preliminary injunction on a patent not included in first patent list BLA holder provides to biosimilar applicant and therefore, important to submit a comprehensive first BLA list.

©2010 Foley & Lardner LLP

10/09/10

Declaratory Judgment

- BLA holder may bring action for declaratory judgment of infringement, validity or enforceability of any patent in first BLA list or supplemental new patent list if biosimilar applicant does not exchange list of patents and provide detailed statements on listed patents, or does not provide notice of commercial marketing, or notify Secretary of HHS of infringement complaint.

Declaratory Judgment (*con't*)

- BLA holder may bring action for declaratory judgment of infringement, validity or enforceability of any patent claiming the biological product or use thereof if biosimilar applicant does not provide copy of the application and manufacturing information.

Declaratory Judgment (con't)

- If biosimilar applicant complied with all requirements, neither BLA holder nor applicant can bring DJ action prior to 180 day marketing notice.

Comparison With ANDA

ANDA-Hatch Waxman Act (1984)	New Biosimilar Legislation
Orange Book listing by NDA holder	No Orange Book equivalent
271(e)(2)(A), (B) Submitting ANDA= infringement: — with respect to patents listed in Orange Book	271(e)(2)(C) Submitting biosimilar application= infringement: — with respect to patents identified on BLA holder's first list, <u>or</u> — with respect to patents that could have been listed in BLA holder's first list, <u>if</u> biosimilar applicant fails to provide application and manufacturing information,

NDA vs. BLA: Patent Submissions (*con't*)

ANDA-Hatch Waxman Act (1984)	New Biosimilar Legislation
<p>In Orange Book, NDA holder may only list patents relating to the chemical entity, formulation or methods of use, <u>not</u> methods of making.</p> <p>Patents having only “methods of making” claims may not be subject to ANDA litigation.</p>	<p>BLA holder assesses patent infringement and sues based on biosimilar application and information about methods of making.</p> <p>Patents having “methods of making” claims may be subject to biosimilar litigation.</p>

©2010 Foley & Lardner LLP

10/09/10

Comparison with ANDA (*con't*)

ANDA-Hatch Waxman Act (1984)	New Biosimilar Legislation
Certification required	No certification required
<p>ANDA applicant must certify regarding all patents listed in Orange Book for product:</p> <p>(I): patent not listed in Orange Book</p> <p>(II): patent has expired</p> <p>(III): Date patent will expire and generic will not market before then</p> <p>(IV): patent is invalid, unenforceable or not infringed</p>	

Comparison with ANDA (*con't*)

ANDA-Hatch Waxman Act (1984)	New Biosimilar Legislation
<p>Within 20 days after ANDA with P(IV) certification is accepted for filing, generic must provide NDA holder:</p> <ul style="list-style-type: none"> (1) Notice ANDA has been accepted for filing and (2) Statement of factual and legal basis of opinion that patent(s) is invalid, unenforceable, or not infringed 	<p>Within 20 days after biosimilar application accepted for filing, applicant must provide BLA holder:</p> <ul style="list-style-type: none"> (1) copy of application (2) other information describing processes used to manufacture product

10/09/10

Strategic Considerations

- For M&A and in-licensing of biologics, new assumptions are needed to address potential for biosimilar competition and market erosion
- 12 year exclusivity provides one potential exclusivity scenario for valuation purposes
- Patent protection beyond 12 year exclusivity period may not exist for some biologics due to long FDA review
- However, patents may protect subject matter broader than approved biologic, and hence may still provide value in keeping competitors out

©2010 Foley & Lardner LLP

10/09/10

Strategic Considerations

- Implications for portfolio management of 12 year data exclusivity
- Late stage patents may be more valuable if their terms extend beyond 12 year data exclusivity
- Because of 20 year from filing date term, patents filed out of Phase III results are more likely to have terms extending beyond data exclusivity
