Luke Hyndiuk is a patent agent in the firm's Mechanical & Electromechanical Technologies Practice. His practice focuses on mechanical systems, particularly those related to vehicle navigation and control technologies, and related areas. This technical knowledge enables him to diligently protect organizations' intellectual property rights and drive their technological progress. Luke's commitment to keeping current with the field of intellectual property and innovations in the mechanical and electromechanical field help him provide companies with patent prosecution strategies tailored to any unique circumstance.

Prior to joining Foley, Luke collaborated with end-user manufacturers as a technical sales consultant for Rockwell Automation, facilitating migrations to the company's latest drive portfolio. His technical experience and personal approach enabled him to help his client adopt specialized solutions to enhance their operations.
